

Tone Brand Kit

Everything you need to represent Tone consistently. All assets are generated from one source of truth — `brand/generate.js` — so the logo, icons, favicon, and social image never drift apart. Rebuild anytime with:

```
node brand/generate.js
```

The logo

The Tone mark is a **microphone capsule with a sound waveform cut out of it**, seated in a cradle. It says “voice” and “recording” at a glance, which maps directly to the product: capturing and reproducing *your* voice.

Three forms:

- **Lockup** — mark stacked above the TONE wordmark. Use for splash screens, the login page, decks, and anywhere with room to breathe.
- **Mark only** — the mic. Use for app icons, favicons, avatars, and tight spaces.
- **Wordmark only** — the letters TONE. Use inline in headers next to the mark or in running text.

Colors

Token	Hex	Use
Ink (background)	<code>#0D0D0C</code>	Primary background, app icon field
Cream (foreground)	<code>#F7F3E9</code>	The mark and wordmark on dark surfaces
Accent (brand)	<code>#6366f1</code>	Per-workspace accent (configurable in-app); default indigo

The logo is **monochrome by design** — cream on ink, or ink on cream. It is not tied to the accent color, so a workspace can recolor its accent without touching the logo. Keep the mark single-color; do not fill the waveform bars with the accent.

CONTRAST RULES

- On **dark** surfaces (the default app theme): use the **cream** mark.
- On **light** surfaces: use the **black** mark (`tone-logo-black.svg`, `tone-mark-black.svg`).
- In-app, the `ToneMark` React component uses `currentColor`, so it inherits the surrounding text color and stays correct in both light and dark mode automatically.

Typography

- **Interface + wordmark:** Geist Sans (already the app font). The TONE wordmark is drawn as vector paths, so it needs no font at render time.
- **Monospace (code, tokens):** Geist Mono.

Clear space and minimum size

- Keep clear space around the lockup equal to the height of the “T” in TONE.
- Minimum mark size: **16px** (favicon). Below that the waveform cut-outs stop reading; use a solid silhouette if you ever need smaller.

Don'ts

- Don't recolor the waveform bars or fill them with the accent.
- Don't add gradients, shadows, or bevels to the mark.
- Don't stretch, rotate, or outline the logo.
- Don't place the cream mark on a light background (or the black mark on dark).
- Don't rebuild the letters in a different typeface and call it the wordmark.

Asset index

BRAND/SVG/ (VECTOR, INFINITELY SCALABLE)

File	What it is
<code>tone-logo-dark.svg</code>	Master lockup: cream on ink (the file you provided)
<code>tone-logo-cream.svg</code>	Lockup, cream, transparent bg — for dark surfaces
<code>tone-logo-black.svg</code>	Lockup, black, transparent bg — for light surfaces
<code>tone-mark.svg</code>	Mic mark, cream, transparent
<code>tone-mark-black.svg</code>	Mic mark, black, transparent
<code>tone-mark-on-dark.svg</code>	Mic mark, cream on ink — the app icon
<code>tone-maskable.svg</code>	Mark inside the 80% safe zone for Android maskable icons
<code>tone-wordmark-cream.svg</code> / <code>tone-wordmark-black.svg</code>	Just the letters
<code>tone-og.svg</code>	1200x630 social card

BRAND/PNG/ (RASTER, FOR PLATFORMS THAT NEED PNG)

- `icon-16 ... icon-1024.png` — square app/favicon sizes
- `favicon.ico` (in `brand/`) — multi-size 16/32/48 favicon
- `apple-touch-icon.png` — 180x180 for iOS home screen
- `android-chrome-192.png`, `android-chrome-512.png` — PWA icons
- `maskable-512.png` — Android adaptive icon
- `og-image.png` — 1200x630 Open Graph / Twitter card
- `tone-logo-1024.png` — master lockup raster

Where these are wired into the app

- `src/app/favicon.ico`, `src/app/icon.png`, `src/app/apple-icon.png`, `src/app/opengraph-image.png` — Next.js file-based metadata (auto-served).
- `public/site.webmanifest` + `public/android-chrome-*.png` — installable PWA.
- `public/brand/*.svg` — logos available at `/brand/...` for decks and emails.
- `src/components/tone-logo.tsx` — the inline `ToneMark` React component used in the header, sidebar, and auth pages.
